

SECURO Winter Triticale

The New **SAFE, RELIABLE, SECURE** Winter Triticale Variety

LOCK into SECURO

The 2 Control varieties used in last years **2014 UK Official Trials** were BENETTO and GRENADO.

SECURO produced an excellent performance compared to the Controls and was one of only two new varieties promoted to 2018 Official Trials. *See results below*

Source: 2014 Official HGCA / BSPB Trials

		Yield (5 Year Mean)	Height (cms)	Yellow Rust Res	Ripening (days)	Spec Weight (kg/hl)
	SECURO	110	116	6.0 % Infection	288	73.6
(c)	Benetto	103	114	16.7% Infection	287	72.7
(c)	Grenado	97	96	26.2% Infection	288	71.5

SECURO produced a superb performance compared to the Control varieties. The **SAFETY** and **RELIABILITY** of **SECURO** was clearly highlighted in its **EXCELLENT** Yellow Rust Resistance in a high disease pressure year, producing significantly improved yields and grain quality. **SECURO** also has excellent resistance to Mildew and Septoria Tritici with very good standing power. **SECURO** has shown outstanding winter hardiness on the continent in countries such as Poland, Czech Republic and Germany where the winters are much more severe than the UK. **SECURO** unlike a number of triticale varieties tillers intensively.

It is a tall strawed variety and suitable both for biomass production (bio gas plants) and for feed.

With a **7% yield** advantage over Benetto and **13%** above Grenado we would strongly suggest that your **FIRST CHOICE** winter triticale variety for sowing in Autumn 2015 is **SECURO**.

For safety, reliability and security

SECURO Winter Triticale

Cope Seeds are very proud to be the chosen UK Marketing Agents for this outstanding new triticale variety. Recently listed in Germany and the Czech Republic, it is being extensively trialled in Poland and several more countries. **SECURO** is rapidly developing an increased market share across Europe with seed being sold in France, Italy, Spain and many more European countries. One of the best triticale varieties that has come through in recent years **SECURO** offers growers a safe and reliable option particularly during times of high carry over disease pressure.

We have only a **Very Limited** organic seed production of **C2 seed available** for Autumn 2018 and therefore suggest that anyone interested in securing seed of this NEW outstanding triticale variety register their interest as early as possible.
