

# GRAFTON

Winter Wheat  
Cordiale x W97

SEEDING  
THE FUTURE  
SINCE 1856

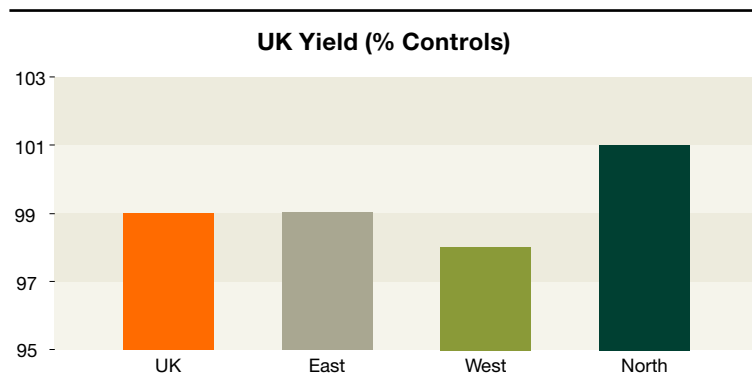

## Sow early - harvest early.

- Ideal for early drilling and very early to harvest
- Nothing is stiffer or shorter
- Quick and easy to combine
- Superb physical grain characteristics
- Ideally suited to very fertile sites

One of the most versatile feed wheats available, Grafton is a consistent performer and is the ideal partner for later maturing wheats. It remains the best variety for early drilling thanks to its slow speed of development. Its early maturity and easy combining, usually ensures a great start to harvest. Grafton's early sown performance is supported by its combination of the Pch-1 Rendezvous gene for eyespot and exceptional specific weight.

Nothing is shorter and stiffer, so a chlormequat PGR programme is all that is needed. Being relatively shy tillering, best practice is to increase seed rates by 50 seeds sq m more than you'd normally use, but being such a short, stiff variety, this won't compromise standing ability.
