

GROWING ADVICE:

- Use a moderate seed rate, crop will tiller well
- Sowing should be between early September – middle/end of October (dependent on conditions). Rye is weak at emergence so drilling into the winter can reduce establishment
- The crop presents impressive spring vigour. Close management of nutrition and PGR applications is required

UNIQUE SELLING POINTS (USP)

- Hybrid technology – gives advantages over conventional varieties.
- Excellent results in whole crop situations.
- Strong agronomically.

SU ARVID

CROP: HYBRID WINTER RYE

STATUS: UK DL CANDIDATE

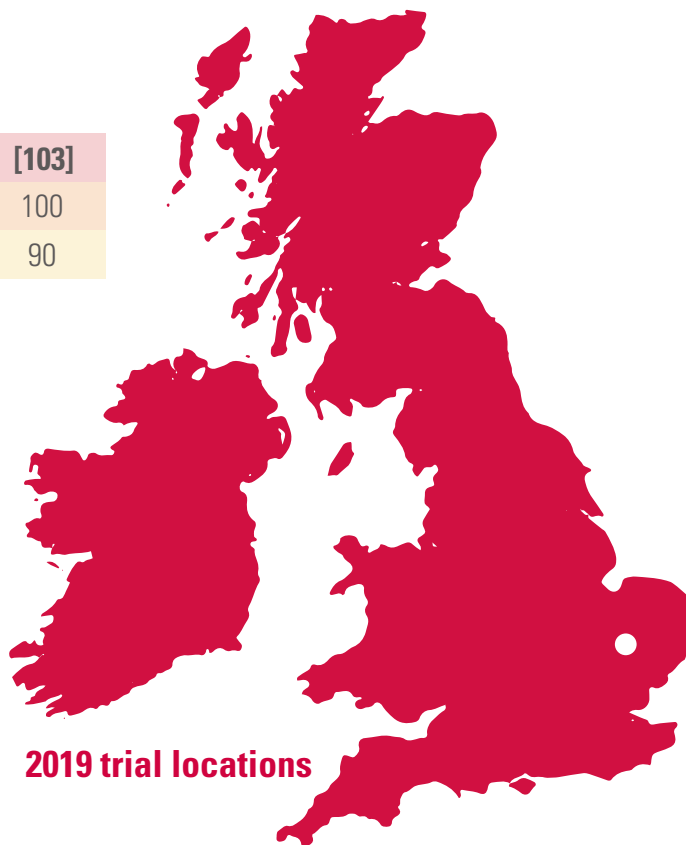

NEW 2020

	SU Arvid	[103]
	SU Mephisto	100
	Inspector	90

Yield (Grain)

	SU Arvid	[77.8]
	SU Mephisto	77.2
	Inspector	78.7
